# PRIVILEGED REMOTE ACCESS SOLUTIONS

Our PRA solution provides **timed, secured, and automated connections** to your resources for privileged internal and external users. From third-party suppliers to system administrators, from legacy to cloud: we've got you covered.

What Are the Most Common Security Threats?

CREDENTIAL THEFT

PASS-THE-HASH ATTACKS

PRIVILEGE ESCALATION

LATERAL MOVEMENT

RANSOMWARE ATTACKS

DATA EXFILTRATION

How Does Remote Privileged Access Help?

SIMPLIFIED MANAGEMENT

Say goodbye to complicated **user provisioning** and administrative overhead. With PRA, privileged users are granted **temporary access** using their own company accounts, completely getting rid of tedious **account lifecycle management**.

ENHANCED SECURITY

Using enterprise-grade security provides privileged access to your environment and protects against modern cyber threats. Additionally, passwordless technologies allow us to completely get rid of legacy **insecure passwords** to offer a seamless access experience without any **VPN clients**.

VISIBILITY

Record and replay sessions in case of audits or security breaches or send security logs to existing SIEM and SOC solutions. At any time inspect who currently has access to your environment and why and **terminate sessions in real-time** when threats are detected.

ORLOX

ORLOX

Functionalities

AUTOMATED REMOTE ACCESS PROVISIONING

Get rid of shared accounts and skip manual creation and configuration of privileged accounts. Go straight to **hassle-free secure connections**. Our magic behind the scenes automates the process of granting remote access.

ZERO TRUST & PASSWORDLESS

Zero-trust policies ensure that privileged users can only access your resources when strict security conditions are met. This also makes a truly **passwordless experience** using biometrics or FIDO2 possible.

ROLE-BASED & JUST-IN-TIME ACCESS

Avoid ambiguity by using **preconfigured roles and permissions** for your users and partners. Just-In-Time access ensures a role is granted for a limited time only and approval flows ensure you always know who is accessing your environment.

CLIENTLESS ACCESS

Get rid of non-secure VPN clients for granting access to your environment. We offer a fully **browser based solution** which is protected by Microsoft Entra to mitigate browser based attacks.

AUDITING & SESSION CONTROL

View **audit trails** of all activities with SIEM integration. In case of a security incident, review and replay session recordings or swiftly terminate any active session, ensuring **rapid incident response**.

HOW DOES IT WORK?

From easy login to secured access at the click of a button: here's how our PRA solution gives your privileged users secure access in just 4 steps.

1 SIGN IN

Users log in with their **own Microsoft account**, secured by advanced verification methods.

2 REQUEST ACCESS

An access request is submitted and sent for **approval**.

3 APPROVE ACCESS

The request is approved and the **provisioning** process is started.

4 LAUNCH SESSION

A link provides **instant** secure remote access in the browser session.

WHY ORLOX?

By combining our cyber security expertise with **Microsoft's Entra platform**, we offer industry trusted and best-in-class security solutions at a **significantly reduced price point** compared to our competitors.
